Patient Consent for Swift Microwave Therapy

What is Swift?

Swift is a cutting edge, FDA Cleared technology that has proven to be highly effective in the removal of plantar warts. It delivers low dose microwave energy through a specialized probe that targets and effectively treats the underlying HPV virus by stimulating a natural immune response in the body. We like to say that we're addressing the root cause; not the symptom.

What to Expect

Swift protocol involves between 3 and 4 treatments, spaced 4 weeks apart; aligning with the body's natural immune cycle. Each treatment lasts only 5-10 minutes and is what we call a "sock off - sock on" treatment: Limited debridement, no breaking of the skin, no bandages. No home treatment is required between treatments and patients are able to resume daily activities immediately post treatment.

How effective is Swift?

Due to Swift harnessing the power of the patient's immune system to target the root cause of the wart (HPV), efficacy is significantly higher compared to other treatment methods.

Does it hurt?

While pain is variable and patient/lesion specific, most patients typically feel some level of discomfort as infected tissue temperatures are rapidly elevated over a 2 second dose of energy. The pain immediately subsides following cessation of energy delivery and there is very limited post procedural pain, in fact some report an immediate reduction in pain levels. All patients may continue with day-to-day activities immediately following treatment.

Possible side effects or complications of treatment include hematoma (blood blister), wound, skin discoloration, scarring, pain, failure to resolve the wart/s, thinning of the skin.

The cost is \$295.00 per treatment. Payment is due at the time of service.

The treatment is not billable to insurance.

By signing below, I have read the above information and understand that I am consenting to Swift Microwave Therapy and I am responsible for payment of all costs for the treatment.
